

## DECORATIVE COATINGS FOR CONCRETE AND MASONRY

### Material Description

The Euclid Chemical Company Tamms brand of decorative coatings are formulated with state-of-the-art resins that provide the most durable and reliable coatings in the industry. The Tamms brand offers a broad line of architectural coatings designed to weatherproof and protect concrete and masonry structures while providing a high quality aesthetic finish.

**TAMMSCOAT®** is a high build, water-based acrylic coating for concrete and masonry. It has excellent resistance to staining, wind driven rain, UV and freeze-thaw cycles, and protects the surface from carbonation. Tammscoat can be tinted using universal tint systems and is available in smooth and fine textures.

**TAMMOLASTIC®** is a flexible, acrylic elastomeric coating for concrete and masonry. It is designed to waterproof, bridge hairline cracks and enhance the aesthetic appearance of vertical concrete, stucco and masonry surfaces. It is available in a wide range of colors and tint bases.

**TAMMOSHEEN®** is a smooth, water-based acrylic emulsion coating. It is a heavy bodied coating that will fill the pores in concrete block, yet will still allow the surface to breathe. It makes an ideal finish coat and will not affect the existing surface texture.

**AQUASTAIN® T-96** is a water-based, penetrating stain for concrete and masonry. It retains the natural texture of the surface without leaving a "painted look." Aquastain T-96 is available in a wide range of colors and tint bases.

**TAMMS MASONRY PRIMER** and **TAMMS H/P PRIMER** are water-based primers used to seal the surface of concrete and masonry. They are used in some cases prior to the application of the coating.

## DECORATIVE COATINGS FOR CONCRETE AND MASONRY

## FEATURES / BENEFITS

- Resists ultraviolet degradation
- Beautifies and protects substrate
- VOC compliant
- Resists airborne dirt, smog, industrial fumes and acid rain
- Long-term protection from weather, over a wide temperature range
- Repels water
- Breathable
- Outstanding adhesion and flexibility
- Resists mildew and fungus growth
- Excellent color retention characteristics
- Resistant to damage from freeze-thaw
- Custom and standard colors and textures

## PRIMARY APPLICATIONS

Applied to these and many other structures:

- Schools
- Hospitals
- Condominiums
- Retail Stores
- Sound Barriers
- Stucco
- Median Barriers
- Tilt-up Units
- Apartment Buildings
- Bridges
